

Digital active and reactive energy meter with measurement of active and reactive instantaneous power, by IR side set up communication

► Direct connection 80 A

Application

The energy-meters "with a green back-lighted LCD screen for perfect reading" are used to measure single-phase systems like in Residential, Utility and Industrial applications.

Monitoring of the energy-consumption goes via a SO pulse output. The products can be set up to communicate with LAN TCP/IP, Modbus RTU, M-Bus, EIB-KNX and SD-Card Datalogger interfaces, used to analyze the energy-consumption to reduce the running cost to a minimum for Industrial plants and buildings like Offices, Hospitals, Universities etc.

- For information on the operation of the LANTCP/IP, Modbus RTU, M-Bus, EIB-KNX and SD-Card Datalogger interfaces, see page 22-30.
